

ToolTalk™ - New Tools and New Technologies for 2012

Classic Warthogs®

- For Tougher Lines & Blockages
- Patented Rotation Control
- Easy Field Maintenance
- Replaceable Nozzle Tips
- The Industry Standard

New Technology Warthogs®

- Excellent for General Cleaning
- High-Speed Rotation
- Low Maintenance Design
- Drilled Nozzle Ports
- No Fluids, No Seats or Seals

What is the new technology StoneAge® is now using in some of the smaller Warthog® models?

We have developed a new, patented, flow-through design that minimizes the moving parts, eliminates all high pressure seats and seals, and requires no viscous fluids. The result is a high-speed rotation nozzle that is perfect for general cleaning.

How does this affect the classic Warthog® models?

Not at all! We're still making the full line of trusted **Warthog**® nozzles. In fact we are offering a new 'Maximum Puller' model this year. (See opposite page at the bottom.) Tough, powerful and effective, these tools have become the industry standard for top-of-the-line performance.

When should contractors use the new Warthog® models?

Classic **Warthogs**® are still the workhorses of the industry, offering proven results in the toughest applications. Our new, flow-through models compliment the classic line by offering high-speed rotation that handles lighter loads in less time.
